RGC1D, RGS1D

DC switching, solid state relays

Main features

- IGBT power semiconductor
- 17.5 mm product width
- Rated operational voltage: up to 1000 VDC
- Rated operational current: up to 25 ADC
- Control voltage range: 4.5-32 VDC
- Input polarity protection
- Removable IP20 cover
- Integrated free-wheeling diode for output protection
- Max. transient peak voltage: 1200 V

Description

This product series is mainly intended to switch a string of photovoltaic panels with a maximum string voltage of 1000 VDC and up to 25 ADC in only 17.5 mm width. It may be used in other DC application as well.

The control port is protected against reverse polarity while the IGBT at the output is protected against back voltage with an integrated freewheeling diode.

RGS1D is the panel mount version while the RGC1D has an integrated heatsink.

Specifications are at a surrounding temperature of 25°C unless otherwise specified.

Applications

Photovoltaic panels, railways

Main functions

- DC switching solid state relay
- 4 kV isolation between input and output

Features

General data

Material	PA66 or PA6 (UL94 V0), RAL7035 Glow wire ignition temperature and Glow wire flammability index conform to EN 60335-1 requirements
Mounting	RGS1D: Panel mount RGC1D: DIN mount RGS1D...DIN: DIN mount
Touch protection	IP20
Overvoltage category	III, 6 kV (1.2/50 µs) rated impulse withstand voltage
Isolation	Input and Output to case 4000 Vrms Input to Output 4000 Vrms

Performance

Output specifications

	RGC1D..15	RGS1D..15DIN	RGS1D..25
Max. operational current: DC-1 @ 60°C	8 ADC	4 ADC	25 ADC[1]
Max. operational current: DC-1 @ 40°C	15 ADC	6 ADC	
Output protection	Integrated free wheeling diode		
Leakage current @ rated voltage	<1.5 mADC		
Minimum operational current	20 mADC		
Maximum transient surge current (t=10 µs)	200 ADC		

1. Max rated current with suitable heatsink. Refer to heatsink selection tables

Output voltage specifications

Operational voltage range **IEC[2]** **UL508[2]**	 24 - 1000 VDC 24 - 600 VDC
Maximum transient peak voltage	1200 Vp
Maximum onstate voltage drop	1.6 VDC

2. -15% on lower voltage limit

Input specifications

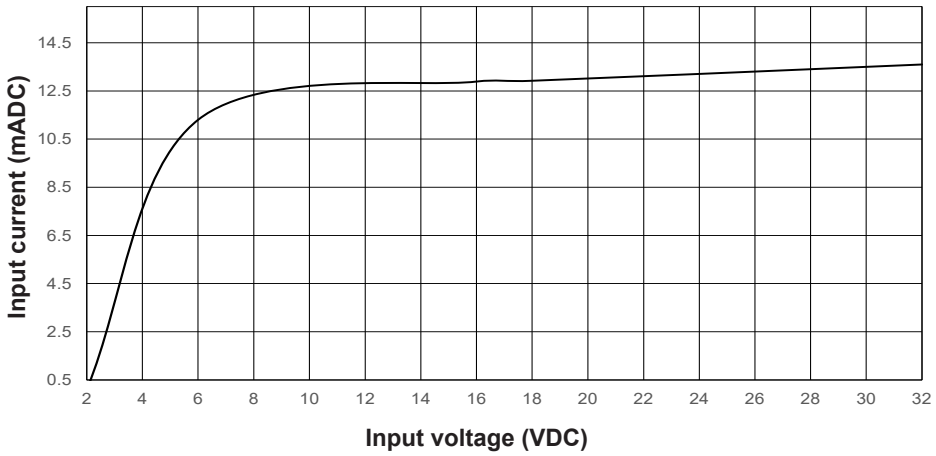

Control voltage range	4.5 - 32 VDC
Pick-up voltage[3]	4.0 VDC
Drop-out voltage	1.0 VDC
Maximum reverse voltage	32 VDC
Maximum response time pick-up	Refer to Time characteristics
Maximum response time drop-out	Refer to Time characteristics
Input current	See diagrams below

Note: Ideally, the control signal should be applied through a contactless switch (for example, open collector)

3. Pickup voltage should be minimum 6 VDC for EMC conformance.

Short circuit protection

Protection Co-ordination, Type 1:

Type 1 protection implies that after a short circuit, the device under test will no longer be in a functioning state.

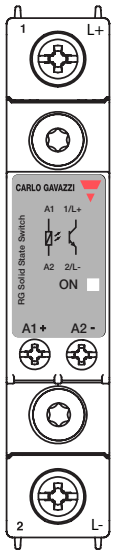

In case, however the short circuit has to be interrupted. The fuse between enclosure and supply shall not open. The door or cover of the enclosure shall not be blown open. There shall be no damage to condcutors ot terminals and the condcutors shall not separate from terminals. There shall be no breakage or cracking of insulating bases to the extent that the integrity of the mounting of live parts is impaired. Discharge of parts or any risk of fire shall not occur.

The product variants listed in the table hereunder are suitable for use on a circuit capable of delivering not more than 5,000ADC, 600Volts maximum when protected by fuses. Tests at 5,000A were performed with RK5 fuses, time delay; please refer to the table below for maximum allowed ampere rating of the fuse. Use fuses only.

Protection co-ordination type 1 according to UL 508				
Part No.	**Prospective short circuit current [kA]**	**Max fuse size [A]**	**Class**	**Voltage [VDC]**
RGC..15	5	25	RK5	Max. 600
RGS..25		25	RK5	

Protection co-ordination type 1 according to IEC/EN 60947-4-1				
Part No.	**Prospective short circuit current [kA]**	**SIBA**		**Voltage [VDC]**
		Max fuse size [A]	**Part number**

Mounting instructions for RGS1D

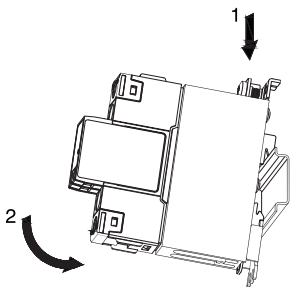

Thermal stress will reduce the lifetime of the SSR. Therefore it is necessary to select the appropriate heatsinks, taking into account the surrounding temperature, load current and the duty cycle.

A fine layer of thermally conductive silicone paste must be applied to the back of the SSR. RGS should be mounted on the heatsink with two M5 x 30 mm screws. Gradually tighten each screw (alternating between the two) until both are tightened with a torque of 0.75 Nm. Then tighten both screws to their final mounting torque of 1.5 Nm.

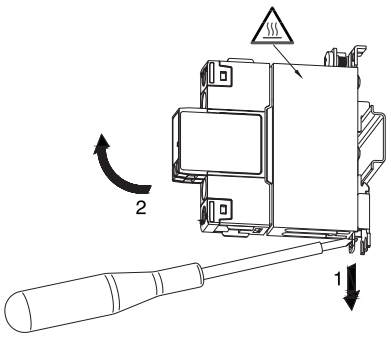

In case of a thermal pad attached to the back of the SSR, no thermal paste is required. The RGS is gradually tightened (alternating between the 2 screws) to a maximum torque of 1.5 Nm.
